EXECUTIVE SUMMARY

The World Health Organization has defined health as “a state of complete physical, social, and mental well-being, and not merely the absence of disease or infirmity” (WHO, 1948). As a condition of their tax-exempt status, non-profit hospital systems are required to conduct a Community Health Needs Assessment every three years and adopt implementation strategies to meet the health needs identified through the assessment process. Likewise, both state regulations and federal accreditation standards require public health departments to conduct a Community Health Assessment every five years. In conducting local health evaluations, organizations must gather information from various sectors of the community, summarize the input received, and describe the community resources that may be available to help address the health needs identified.

The 2021 Eau Claire County Community Health Assessment (CHA) was conducted collaboratively by the Community Health Assessment Planning Partnership Committee (also referred to in this report as the CHA partners). This partnership, which includes county health departments, local healthcare facilities, and community organizations, was established to optimize the coordination and use of resources while reducing duplicative efforts. Although this report is specific to Eau Claire County, the CHA partners used a parallel process to assess health needs in Chippewa County as well. The shared process in Chippewa and Eau Claire counties recognizes overlapping service areas and resources in these communities.

The purpose of the assessment process is to identify and prioritize significant community health needs, as well as to identify potential resources to address those needs. The CHA partners factored data from several sources into a prioritization matrix to identify those health areas on which to focus local health improvement efforts. Those sources included a Community Health Survey; secondary health data involving local and national comparisons; a series of virtual Community Conversations with county residents and stakeholders; and Eau Claire Healthy Communities, a local coalition that promotes the health and well-being of individuals, families, and communities in Eau Claire County. Each of these sources examined 14 health areas based on the state health plan ([Healthiest Wisconsin 2020](#)). This process involving the four primary inputs in conjunction with the weighted matrix identified the following top priorities: **Drug Use, Mental Health, Alcohol Misuse, Obesity,** and **Healthy Nutrition.**

TIMELINE

The Community Health Assessment in turn serves as an input to the three-year, county-wide Community Health Improvement Plan (CHIP), which includes goals, measurable objectives, and implementation strategies that address the county's top health priorities. Data from this report will be used by Eau Claire Healthy Communities to create the plan. While the assessment itself involves county residents in identifying which health areas most need improvement, the CHIP process provides an opportunity for community members to determine how to make those improvements in Eau Claire County. In addition, each of the CHA partners will use information gathered during the assessment process to inform the work of their organizations. The results of this assessment thus will be used individually and jointly by the partner organizations to develop and implement plans for improving community health in the identified priority areas.

ACKNOWLEDGEMENTS

The Community Health Assessment (CHA) Planning Partnership Committee consisted of representatives from nine community organizations in Eau Claire and Chippewa counties. These organizations signed a Memorandum of Understanding (MOU) that outlined agreed upon goals, activities, and contributions from each of the partner organizations. The Eau Claire City-County Health Department served as the fiscal agent for the partnership and contracted for a part-time, limited-term project manager to facilitate and coordinate the assessment process.

Members of the Community Health Assessment Planning Partnership Committee included:

Laura Baalrud	Outreach Facilitator, HSHS Sacred Heart Hospital and St. Joseph's Hospital; Director of Chippewa Health Improvement Partnership
JoAnna Bernklau	Community Benefits Coordinator, Marshfield Clinic Health System
Sara Carstens	Director of Community Engagement and Wellness, Mayo Clinic Health System
Cortney Draxler	Policy and Systems Division Manager, Eau Claire City-County Health Department
Melissa Ives	Community Health Assessment Project Manager, Report Author
David Lally	Director of Community Benefits and Advocacy, Hospital Sisters Health System
Allie Machtan	Director of Community Health, Marshfield Clinic Health System
Komi Modji	Epidemiologist, Chippewa County Department of Public Health
Andy Neborak	Executive Director, United Way of the Greater Chippewa Valley
Maria Seibel	Community Engagement and Wellness Specialist, Mayo Clinic Health System

Several individuals also supported this process by providing technical assistance behind the scenes and/or during meetings. These included Peggy O'Halloran, Evaluator, Eau Claire City-County Health Department; Gina Schemenauer, Public Health Specialist, Eau Claire City-County Health Department; Ashley Hahn, Intern, Eau Claire City-County Health Department; Cortney Nicholson, Community Health Educator, Eau Claire City-County Health Department; and Nikki Hoernke, Community Health Planning Promotion Specialist, Chippewa County Department of Public Health.

In addition, we benefited from the assistance of several other organizations and individuals who helped publicize, distribute, and collect the Community Health Survey and share information about the Community Conversations with county residents and stakeholders.

Finally, we could not have completed the assessment process without the active involvement of numerous professionals and members from the community at large – including those who completed the Community Health Survey, engaged in Community Conversations, and/or participated in the Eau Claire Healthy Communities discussion and prioritization exercise.

A graphic featuring a stylized mountain range in shades of gray and teal. A white circle is positioned above the leftmost peak, resembling a sun or moon. The text 'COMMUNITY PROFILE' is written in large, bold, black, sans-serif capital letters across the top. Below it, 'EAU CLAIRE COUNTY' is written in a smaller, teal, sans-serif font.

COMMUNITY PROFILE

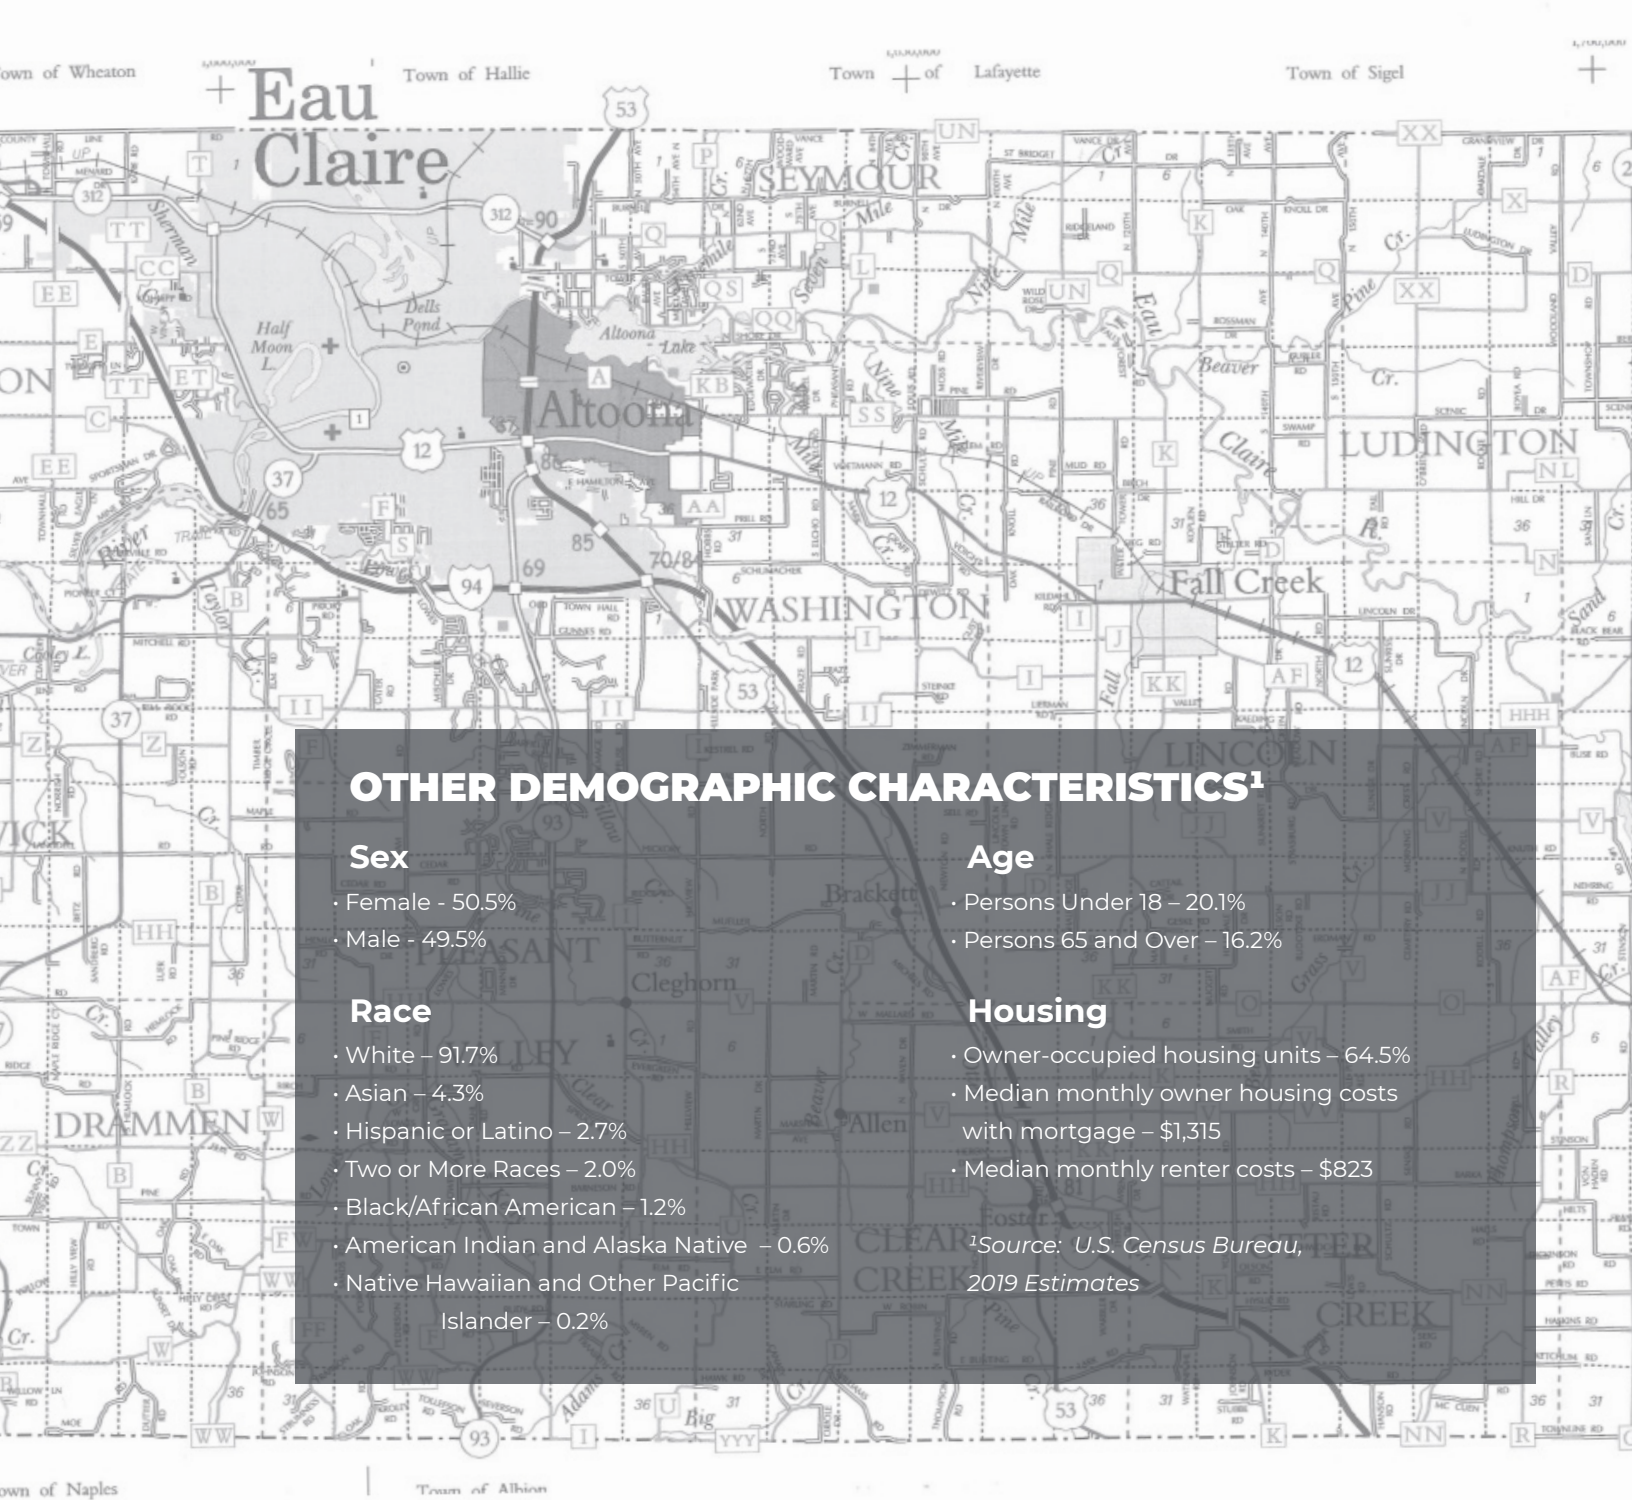

EAU CLAIRE COUNTY

Named after the “clear water” of the Eau Claire River, Eau Claire County covers 638 square miles of land in the Chippewa Valley of west-central Wisconsin. The county is comprised of three cities (Altoona, Augusta, and Eau Claire), two villages (Fairchild and Fall Creek), and 13 townships. Bordering counties include Chippewa to the north; Dunn and Pepin to the west; Buffalo, Trempealeau, and Jackson to the south; and Clark to the east. As of 2019, the U.S. Census Bureau estimated the county’s population to be 104,646.¹

Eau Claire, the county seat, is home to nearly two-thirds (68,802) of the county population and encompasses 32 square miles.¹ The city lies approximately 90 miles east of the Minneapolis/St. Paul (MN), 200 miles west of Green Bay, and 90 miles north of La Crosse (WI). Major transportation corridors through the area include Interstate 94 and U.S. Highway 53.

Major industries include health care, social services, retail trade, manufacturing, and education. The health care sector alone employs thousands of area residents through the Mayo Clinic Health System, Marshfield Clinic Health System, HSHS Sacred Heart Hospital, Prevea Health, OakLeaf Medical Network, and smaller medical facilities. Median household income within the county is \$59,476, with 10.6% of the population estimated to live in poverty.¹ According to United Way’s ALICE (Asset Limited, Income Constrained, Employed) Report, 25% of Eau Claire County households in 2018 earned more than the federal poverty level but less than the basic cost of living.

The University of Wisconsin-Eau Claire and Chippewa Valley Technical College serve as significant hubs of higher education within the county. Nearly one-third of residents aged 25 and older have earned at least a bachelor’s degree, while approximately 94 percent of the 25+ population have received a high school diploma (or its equivalent).¹

OTHER DEMOGRAPHIC CHARACTERISTICS¹

Sex

- Female - 50.5%
- Male - 49.5%

Race

- White - 91.7%
- Asian - 4.3%
- Hispanic or Latino - 2.7%
- Two or More Races - 2.0%
- Black/African American - 1.2%
- American Indian and Alaska Native - 0.6%
- Native Hawaiian and Other Pacific Islander - 0.2%

Age

- Persons Under 18 - 20.1%
- Persons 65 and Over - 16.2%

Housing

- Owner-occupied housing units - 64.5%
- Median monthly owner housing costs with mortgage - \$1,315
- Median monthly renter costs - \$823

OVERVIEW

This Community Health Assessment represents the combined efforts of CHA partners in Chippewa and Eau Claire counties. Since both public health departments and non-profit hospital systems are required to conduct such assessments, collaborating on this process reduces duplication of effort, avoids overwhelming the public with numerous, similar surveys and meetings, produces a common understanding of community needs, and fosters synergy in addressing those needs.

As referenced in the **Acknowledgements** section of this report, partners in this effort included:

- **Chippewa County Department of Public Health**
- **Chippewa Health Improvement Partnership**
- **Eau Claire City-County Health Department**
- **Eau Claire Healthy Communities**
- **HSHS Sacred Heart Hospital**
- **HSHS St. Joseph's Hospital**
- **Marshfield Clinic Health System**
- **Mayo Clinic Health System**
- **United Way of the Greater Chippewa Valley**

The 2021 report represents the third consecutive three-year cycle these organizations have worked together on the CHA. These partners also produced joint reports in 2015 and 2018. Each of the public health departments and hospitals, as well as United Way, signed the MOU outlining the purpose of the collaboration and the commitment of each organization. Specifically, each of these organizations provided both a financial contribution and in-kind resources in the form of organizational support (personnel and expertise) to this effort. The two coalitions – Chippewa Health Improvement Partnership and Eau Claire Healthy Communities – provided direct support through participation in the prioritization process; these coalitions also were represented indirectly in the planning partnership by members who also work for one of the other partner organizations.

The Eau Claire City-County Health Department (ECCCHD) served as the fiscal agent for this initiative. In this role, ECCCHD hired a part-time project manager to guide the CHA process, including survey development and distribution, data collection, public meeting facilitation, media contacts, and report writing. Other project expenses included office supplies, advertising, graphic design, and printing.

The CHA partners convened in September 2020 and met bi-monthly until May 2021 to plan and implement the assessment. Due to COVID-19, all planning and public meetings were held virtually – the first time this process has been conducted almost entirely online.

The purpose of the CHA was to engage the public systematically in the identification of health needs and priorities in each county, as well as to encourage participation in positive change through involvement in one of the local health coalitions (Chippewa Health Improvement Partnership or Eau Claire Healthy Communities) or another organization working to address these issues. The results of the CHA serve as the foundation for selecting projects and strategies to improve community health overall, as well as to advance outcomes for specific populations. In particular, coalitions will use data collected through this process to identify and address health disparities and inequities within the county.

The CHA partners modeled their work after the [County Health Rankings and Roadmaps](#) Take Action Cycle. As illustrated in FIGURE 1, this cycle depicts a series of steps for transforming community health. This continuous sequence begins with working together to assess community needs and resources and establish points of focus (i.e., set priorities). Communication with and among diverse stakeholders is essential to effective transformation.

For this assessment, the process involved identifying top health priorities through the public evaluation of 14 different health areas based on the state health plan ([Healthiest Wisconsin 2020](#), Wisconsin Department of Health Services). Due to longstanding concerns about both drug use and alcohol misuse and the recognition that community members may hold different perceptions about these issues, the CHA process in Chippewa and Eau Claire counties broke these into separate health areas (versus combining them, as in the state health plan). For similar reasons, the local process also separated out obesity from chronic disease. The 14 health areas evaluated through the CHA process were:

FIGURE 1 -
Take Action Cycle
Source: County Health Rankings

- **Alcohol Misuse**
- **Chronic Disease Prevention and Management**
- **Communicable Disease Prevention and Control**
- **Drug Use**
- **Environmental and Occupational Health**
- **Healthy Growth and Development**
- **Healthy Nutrition**
- **Injury and Violence Prevention**
- **Mental Health**
- **Obesity**
- **Oral Health**
- **Physical Activity**
- **Reproductive and Sexual Health**
- **Vaping/Tobacco Use and Exposure**

The CHA partners used several methods to collect both qualitative and quantitative information through the assessment process. The four primary strategies utilized for gathering the data needed to complete this report involved distributing a Community Health Survey, compiling secondary data (health comparisons), holding Community Conversations, and meeting with health coalitions (Chippewa Health Improvement Partnership and Eau Claire Healthy Communities). These sequential steps essentially built on each other, as participants in the Community Conversations reviewed both survey results and secondary (local, state, and national) health data, while the coalition meetings also incorporated discussion about themes and priorities emerging from the Community Conversations.

COMMUNITY HEALTH ASSESSEMENT (CHA) TIMELINE

September 2020	Planning partnership convened to plan the CHA
December 2020	Community Health Surveys distributed online for each county
December 2020	Survey status reviewed, additional outreach conducted
January 2021	Secondary (quantitative) health care data compiled
February 2021	Community Conversations held to identify top health priorities
March 2021	Coalition meetings held to determine top health priorities
March 2021	Priority rankings finalized
May 2021	CHA report completed and publicized

DATA COLLECTION METHODS

COMMUNITY HEALTH SURVEY

The CHA partners began their work by developing a Community Health Survey that asked residents about their perceptions of the degree to which each health area poses a problem in their community and the reasons why they considered these areas to be problematic. “Unsure” was added to the list of possible responses this year (see sample question on next page). Respondents also were offered an opportunity on the survey to provide additional comments about each health area. Finally, the survey asked respondents to identify the top three health areas they thought were in need of improvement in their county.

While the survey largely mirrored past versions, two questions added during this cycle sought to inquire about social determinants of health (i.e., social and economic factors that may influence health outcomes). First, individuals were asked about county strengths that support community health. Next, respondents were asked about factors that contribute to community health concerns. In Eau Claire County, residents pointed to *parks, health care, and education* as the greatest community strengths and cited the *availability of resources to meet daily needs, socioeconomic conditions and poverty, and access to health care* as the greatest concerns.

The survey also asked several demographic questions to identify basic characteristics of respondents. These questions centered around age, gender, race, ethnicity, income, education, employment, housing, and household composition. While these questions were optional, approximately 75% of

respondents chose to answer these questions. Responses indicated survey takers were most likely to be White, non-Hispanic females in their 30s, 40s, or 50s residing in or near the City of Eau Claire. Residents who completed the survey also tended to have at least a bachelor's degree; be employed full-time; report a higher household income; and own a home. Sixty percent of respondents came from one- or two-person households, and nearly two-thirds reported no children under 18 in the household. This information provided insight into which sectors of the population did – and did not – complete the survey. [Appendix I](#) compares the demographic profile of survey respondents with that of the county as a whole.

Several versions of the survey were developed, including full-length, online versions in both English and Spanish on SurveyMonkey and both full-length and “short” paper versions in English and Spanish. The alternate versions were developed as a strategy to solicit greater feedback from non-English speakers and individuals with limited computer access or proficiency. Descriptions of the health areas were simplified per the recommendations of Wisconsin Health Literacy to aid in reading comprehension. [Appendix II](#) provides the short English version of the survey.

The CHA partners conducted survey outreach through a variety of methods. These included sharing the SurveyMonkey site through partner distribution lists (including dozens of community organizations), websites, and social media; purchasing ads through Volume One and Facebook; distributing flyers through community organizations such as Feed My People; conducting specific outreach to vulnerable populations through groups such as JONAH (Joining Our Neighbors Advancing Hope), El Centro and the Eau Claire Area Hmong Mutual Assistance Association; and distributing paper surveys through the Aging and Disability Resource Center (via Meals on Wheels) and Eau Claire County Jail. A press release to local media outlets also accompanied release of the survey. Precautions around COVID-19 prevented the more targeted, in-person outreach efforts conducted during past assessment cycles, and the heavy reliance on virtual communication appeared to pose a significant obstacle to more comprehensive community outreach and survey completion.

A total of 976 Eau Claire County residents – slightly more than half of the number from 2018 – completed the survey. Another 128 individuals answered only the first two questions of the survey

sample question

HOW BIG OF A PROBLEM IS HEALTHY NUTRITION IN YOUR COMMUNITY?

Not a problem

Slight problem

Moderate problem

Major problem

Unsure

(pertaining to residency), and these surveys were excluded from the total count, as were another 97 responses that indicated residency in neither Chippewa or Eau Claire counties (non-residents were not allowed to complete the survey).

Those health areas identified most frequently as a “major” concern by survey takers included *Mental Health, Drug Use, and Alcohol Misuse*, followed by *Obesity* and *Communicable Disease Prevention and Control*. As shown in FIGURE 2, *Mental Health, Drug Use, Alcohol Misuse*, and *Obesity* topped the list of health areas most in need of improvement (followed by *Healthy Nutrition*).

FIGURE 2 - Community Health Survey Prioritization

SECONDARY DATA

The next step in the assessment process involved the collection and review of local, state, and national data comparisons in each of the 14 health areas. Although most of these performance indicators followed the recommendations of the Wisconsin Association of Local Health Departments and Boards, the core set of measures was modified based on recent data availability and comparability (based on sources and timeframes). Data sources included the [2020 County Health Rankings](#), Centers for Disease Control and Prevention ([Behavioral Risk Factor Surveillance System](#), [Youth Risk Behavior Surveillance System](#), etc.), Wisconsin Department of Health Services, and other public resources.

The information collected through this process provided an objective manner in which to measure overall county health in each of the focus areas. This data, in combination with the survey results,

formed the basis for discussion during the subsequent Community Conversations. Comparisons between county and national data also were factored into the final health area prioritization.

[Appendix III](#) lists the entire core dataset. Since time limitations prohibited review of every measure during the Community Conversations and coalition meeting, those discussions referenced just a snapshot of the data available for each health focus area. The more comprehensive data compilation remains available for use by Eau Claire Healthy Communities and other organizations and coalitions as they seek to target their efforts and measure progress in community health over time.

NOTE: The Community Health Survey results reveal local perceptions about each of the 14 health areas, while county, state, and national health data comparisons provide some context for understanding the extent to which these areas are problematic in Eau Claire County. The **Health Focus Area Summaries** section of this report provides an overview of both resident perceptions and key secondary data.

COMMUNITY CONVERSATIONS

The survey results and secondary data points were presented during a series of three online public Community Conversations in February. Sessions were held at different times – morning, afternoon, and evening – over the course of two days (Feb. 9 and 10) to provide multiple opportunities for participation. Once again, these events were publicized widely through e-mail, websites, social media, and other means. The CHA partners conducted outreach to and through health care and other service providers, local government, libraries, senior centers, educational institutions, churches, and the Chamber of Commerce, among other community organizations. A press release to local media outlets also preceded the conversations.

These sessions provided an opportunity to dig deeper into local health impacts and prioritization criteria through focused breakout room discussions. The CHA partners facilitated these small groups to help participants work through a series of questions intended to pinpoint community health needs. These groups then reconvened in the large group and reported out major discussion points. Each session culminated in an online health focus area prioritization poll.

Once again, participants indicated the top three health areas they would like to target for improvement in Eau Claire County. *Mental Health, Drug Use, Alcohol Misuse, Healthy Nutrition, and Chronic Disease*

discussion questions

WHICH HEALTH AREAS HAVE THE LARGEST COMMUNITY IMPACT?

Consider which areas have a high number of people affected, which areas affect certain groups more than others, and how big the problem is in our community.

WHICH HEALTH AREAS HAVE THE MOST SERIOUS IMPACT?

Which areas result in disability, death, have long-term effects, or need action right now? Is the problem getting worse? Will the problem get worse if no action is taken?

WHICH AREAS ARE OUR COMMUNITY READY TO CHANGE?

Will the community accept new or added programs? Are new programs wanted in certain areas? Is change on a local level reasonable?

Prevention and Control topped this list (see FIGURE 3). Forty-four individuals, representing many different sectors of the community (health care, education, hunger relief, aging, etc.), participated in the prioritization exercise.

An evaluation conducted following the Community Conversations provided participants with an opportunity to indicate interest in joining Eau Claire Healthy Communities to work on addressing priority health needs. Nearly half of respondents indicated they were or may be interested in joining this coalition, which uses health data and best practices to promote the well-being of individuals, families, and communities in the county.

FIGURE 3 - Community Conversations Prioritization

COALITION MEETING

Meeting with members of Eau Claire Healthy Communities served as the final major step of the assessment process. The CHA project manager provided an overview of the previous three components to more than a dozen coalition members on March 11. This background provided context for additional small group discussions. Those present represented a wide range of community backgrounds and health interests, lending broad expertise to this exercise. The CHA partners facilitated virtual breakout room discussions around the same set of questions posed during the Community Conversations and then summarized key takeaways upon reconvening the full group. Prior to adjourning, participants indicated their top three health priorities via an online poll.

Once again, *Mental Health* dominated both the online discussion and voting landscape, and consensus around the importance of addressing this issue was near unanimous. *Alcohol Misuse* also received a significant majority of votes, while nearly half of participants selected *Drug Use* and *Chronic Disease* as health priorities. The interconnectedness of many health areas also emerged as a common theme within group conversations.

FINAL PRIORITIES

As noted previously, the CHA partners used a weighted matrix to determine a priority order for each of the 14 health focus areas. This part of the process involved scoring each of the areas based on the results of the prioritization question in the survey, comparison of local and national data, and voting by participants in the Community Conversations and coalition meeting. The secondary data comparison involved an examination of comparable performance indicators using like sources and timeframes. This calculation excluded measures that lacked a direct comparison of local and national data (e.g., in some cases, only local and state or state and national data were available from the same source). A ratio system then was used to determine the degree to which Eau Claire County exceeds or falls below national averages for each of the measures. The four components were weighted as follows: Community Health Survey – 35%, secondary data – 35%, Community Conversations – 20%, and coalition (Eau Claire Healthy Communities) meeting – 10%.

Final scoring via the prioritization matrix ranked **Drug Use**, **Mental Health**, and **Alcohol Misuse** as the county's top health priorities. Indeed, these topics rose to the forefront of nearly every small group discussion. *Mental Health*, in particular, was noted not just for its individual impact but for its bearing on nearly every other health issue as well. Meeting participants often noted a link between *Mental Health*, *Drug Use*, *Alcohol Misuse*, *Physical Activity*, *Healthy Nutrition*, *Obesity*, and *Chronic Disease*, for example. While participants expressed a strong belief that the community is ready to make the changes needed to improve *Mental Health* and perhaps *Drug Use*, questions arose about readiness to change a long-standing culture that supports – and sometimes prides itself in – *Alcohol Misuse*. Nonetheless, these health areas easily outdistanced all others in the final ranking.

Obesity and *Healthy Nutrition* rounded out the top five health areas. It is important to note again that much discussion took place regarding the inter-relatedness of these issues with other health areas, including *Physical Activity* and *Chronic Disease*. Consequently, many discussion groups noted the importance of attacking “root causes” to improve health in a more comprehensive manner.

While *Communicable Disease* received more attention during this assessment cycle due to COVID-19, concern about this area was not significant enough to elevate it into the top tier of health priorities. Nonetheless, many discussion groups reported the negative impact of the pandemic on virtually every other health area.

The top five health priorities over the past three cycles are listed on the previous page, along with the 2021 ranking of the other health focus areas. These rankings reflect consistent perceptions about the highest-ranking priorities over an extended period of time.

DATA USE

Eau Claire County has several collaborative partnerships that benefit from a wealth of community support and sustainable resources to improve programs and policies around community health. The CHA report will be used by these coalitions, as well as individual organizations, to prioritize funding applications, build on existing strengths, support continuous quality improvement, address health needs and disparities, and engage stakeholders and policy makers in system-level change to improve community health in Eau Claire County. This CHA and supporting documentation will be shared among partner organizations and made available publicly on partner and coalition websites.

Eau Claire Healthy Communities, in particular, will use this information to identify collaborative goals and evidence-based strategies that address complex health issues through development of a Community Health Improvement Plan. This plan in turn provides a framework for guiding the work of the ECHC action teams during the three-year period between health assessments.

SOCIAL DETERMINANTS OF HEALTH

The CHA partners feel strongly about referencing Social Determinants of Health (SDOH) as a framework for understanding and improving community health. As defined by the U.S. Department of Health and Human Services, SDOH are “the conditions where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks.” The national health plan, [Healthy People 2030](#), divides these factors into five separate domains as described below.

Economic Stability underscores the connection between financial resources and health. Consequently, issues like employment, food security, housing stability, and poverty fall under this domain.

Education Access and Quality links education to health and well-being. Early childhood education, literacy, high school graduation, and higher education all fall into this realm.

Health Care Access and Quality involves the connection between understanding health services, accessing those services, and personal health. Issues like health literacy and insurance access fall under this category.

Neighborhood and Built Environment involves the association between where a person lives (housing, neighborhood, and environment) to health and well-being. Examples of issues under this domain include air and water quality, transportation, and crime.

Social and Community Context relates health and well-being to the context within which people live, learn, work, and play. Community cohesion, discrimination, workplace conditions, and incarceration all serve as important indicators within this category.

FIGURE 4 depicts these five domains as working together to support community health.

This model recognizes that not all people receive the same opportunities to thrive and that inequity in these life conditions contributes to disparities in well-being. Consequently, improving health requires addressing the root causes that influence health outcomes. In other words, socioeconomic conditions and the physical environment, in addition to health behaviors and clinical care, must be addressed to provide all members of society with the opportunity to achieve optimal health.

FIGURE 4
Social Determinants of Health - 5 Key Areas | Source: *Healthy People 2020*

This CHA cycle began to incorporate consideration of SDOH by asking survey respondents to identify those community factors that support health and those issues that serve as barriers to well-being.

As noted earlier in the report, *parks, health care, and education* were named most often as community strengths. Conversely, issues like *mental health and substance use treatment access and affordable housing* received relatively few mentions as strengths. Meanwhile, issues like the *availability of resources to meet daily needs, socioeconomic conditions and poverty, and access to health care* topped the list of conditions that pose health concerns.

There was some evidence that discussion group participants factored these issues into their conversations. For example, some groups asked how parks could be leveraged more as a strength to support community health.

Organizations can work together to impact social determinants (i.e., root causes) through unified planning and policy. This approach requires community partners across public and private sectors to incorporate health considerations into all policy decisions in order to improve health outcomes and quality of life for every segment of society.

HEALTH DISPARITIES AND INEQUITIES

Improving the health of all people in the community by nature mandates a focus on identifying health disparities and addressing inequities. Health disparities are population-based differences in health outcomes linked to social, economic, and/or environmental disadvantages. Under this premise, equal outcomes cannot be realized until individuals receive the same opportunities to achieve health and wellness. Consequently, more resources may need to be directed toward certain sectors of the community in order to produce the same results found elsewhere.

survey questions

What are the greatest strengths in your county in relation to community health?

Which of the factors contribute most to your top community health concerns?

In other words, equity must precede equality. While equality assumes that similar inputs will produce the same outcomes, equity recognizes that people start from dissimilar places and thus benefit differently from those same inputs. FIGURE (5) illustrates the difference between a one-size-fits-all approach (equality) and a targeted approach that meets the needs of specific populations (equity).

FIGURE 5 Equality Vs. Equity | Source: Robert Wood Johnson Foundation (2017)

While county-level data on health disparities is limited, the assessment process provided at least some insight into existing inequities. Examples of these societal disadvantages as they relate to the Social Determinants of Health are described below.

The issue of *Economic Stability* is referenced in the [2018 United Way ALICE Report for Eau Claire County](#), which estimates the number and percentage of households with income below the poverty level or above the poverty level but below the basic cost of living for the area. The report indicates that individuals aged 65 and older comprise about 1/4 of households within the county – and the largest percentage of households (38%) that fall within the ALICE income threshold. The report also provides a revealing glimpse into the locations within the county most affected by lower incomes. For example, nearly 3/4 of households in the Village of Fairchild report income at the poverty or ALICE level. Meanwhile, 43 percent – or more than 26,600 households – in the City of Eau Claire fall into one of these income categories. This indicates many older adults and families in the county may struggle to pay for everyday expenses such as food, healthcare, technology, and transportation.

Additionally, the [County Health Rankings](#) indicate that 13% of households in Eau Claire County face a severe housing cost burden – that is, housing costs account for at least 50% of household income for these individuals and families. This burden leaves even fewer resources to meet other basic needs, resulting in further financial stress.

It may not be surprising then that survey respondents reported affordability concerns in many health focus areas, including *Mental Health, Drug Use, Healthy Nutrition, and Chronic Disease* or that these individuals indicated the *availability of resources to meet daily needs and socioeconomic conditions* pose significant obstacles to community health.

The [County Health Rankings](#) also report the county's income equality ratio at 4.4. – that is, households with income at the 80th percentile make more than four times the income of households at the 20th percentile. CHR notes that income inequality serves as a social stressor by highlighting differences in social class and status and decreasing social connectedness, a concern highlighted in the *Social and Community Context* domain of the SDOH.

A new Community Health Needs Assessment tool developed by the Wisconsin Hospital Association may help pinpoint the actual health disparities influenced by these inequities by hospital service areas and zip codes in the future. Greater clarity around these issues will aid development of effective plans and strategies to address local community health needs.

The assessment process did seek to incorporate the input of populations that may face health disparities and inequities by reaching out to a variety of community organizations and agencies – from meal sites to jails to senior centers to churches – to distribute flyers and surveys, as well as to publicize the Community Conversations. While professionals within the community lent a great deal of expertise to this exercise, the CHA partners recognize more participation from individuals within vulnerable population groups would have contributed valuable input to the assessment process.

COMMUNITY ASSETS INVENTORY

Finally, Eau Claire County is home to many service providers and other organizations committed to improving community health and well-being. Many of these entities are actively involved in collaborative and individual efforts to address health needs within the county. These organizations serve as community strengths that support well-being in Eau Claire County. In conjunction with the assessment process, the CHA partners collected and shared information to develop the resource inventory provided in [Appendix IV](#) of this document. While not exhaustive, this list offers a glimpse into local assets that may be leveraged to improve community health.

COMMUNICABLE DISEASE PREVENTION & CONTROL

Healthier communities prevent diseases that are caused by bacteria, viruses, fungi, or parasites and can pass from person to person or animal to person. Examples include:

- Influenza
- COVID-19
- Salmonella
- Measles
- West Nile Virus
- Lyme Disease

Healthier communities control the spread of these diseases with:

- Immunizations (like vaccines)
- Formal health care (like yearly check-ups)
- Personal health habits (like washing hands)

WHAT PEOPLE SAID ON THE COMMUNITY HEALTH SURVEY

Why is Communicable Disease Prevention & Control a problem in our county?

People don't understand importance of communicable disease prevention and control **75%**

Control practices are not the easy or desirable option **69%**

Prevention methods are not the easy or desirable option **44%**

How serious is this health area in Eau Claire County?

Percent of Children Ages 19 to 35 Months Who Received the Recommended Doses of DTaP, polio, MMR, Hib, Hepatitis B, Varicella, and PCV¹

Community Health Survey

COMMUNITY HEALTH SURVEY FOR CHIPPEWA AND EAU CLAIRE COUNTIES

This survey is being conducted to better understand the health issues in Chippewa and Eau Claire counties and how to address them.

Participation in this survey is voluntary. Your answers will be anonymous, confidential, and combined with those of all other survey respondents. The results will be shared with community members who are interested in improving the health of our community. Estimated time to complete this survey is 5-10 minutes.

The questions in this survey are based on the Health Areas of the Wisconsin State Health Plan. For each health area, please indicate whether you feel the area is a problem in the Chippewa and Eau Claire County community and share your ideas about services and programs that would help improve community health.

Please note that this survey is intended to be completed by residents of Chippewa and Eau Claire counties only. The deadline for submission is January 10, 2021. Completed surveys may be put in an envelope marked "Attention to PH" and placed in the drop box outside Door 5 of the Chippewa County Courthouse, dropped off at the Eau Claire City-County Health Department, or mailed to the Eau Claire City-County Health Department at 720 2nd Ave., Eau Claire, WI 54703.

1. DO YOU LIVE WITHIN CHIPPEWA OR EAU CLAIRE COUNTY?

- Yes- Chippewa County
- Yes- Eau Claire County
- No

2. FOR EACH HEALTH AREA LISTED BELOW, PLEASE INDICATE IF YOU FEEL IT IS A PROBLEM IN YOUR COMMUNITY (CHIPPEWA OR EAU CLAIRE COUNTY).
